

ANALYZING PIZZA SALES USING SQL

Insights and Trends in Pizza Sales

NAME:PUSHPENDRA SHARMA

DATE:17/10/2023

INTRODUCTION

Objective: Understand how SQL queries can help analyze pizza sales data.

AGENDA

01 Data Overview

02 SQL Queries for Sales Analysis

03 Key Insights

04 Conclusion

DATA OVERVIEW

Tables Used:

- Orders: Contains order details (Order_id, Order_Date, Order_Time)
- OrderS_DETAIL: Contains item details per order (Order_ID, Pizza_ID, Quantity)
- Pizzas: Contains pizza details (Pizza_ID, Pizza_Type_id, Size, Price)
- pizza_Types: Contains pizza type (Pizza_Type_id, Name, Category, Ingredients)

SQL QUERIES FOR SALES ANALYSIS

1.calculate the total revenue generated from sales.

```
SELECT
    ROUND(SUM(orders_detail.quantity * pizzas.price),
          2) AS total_sales
FROM
    orders_detail
    JOIN
    pizzas ON pizzas.pizza_id = orders_detail.pizza_id;
```

| Result Grid | | |
|-------------|-------------|--|
| | total_sales | |
| ▶ | 355017.4 | |

TOP-SELLING PIZZAS

2.IDENTIFY THE HIGHEST-PRICED PIZZA.

```
SELECT
    pizza_types.name, pizzas.price
FROM
    pizza_types
    JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
ORDER BY pizzas.price DESC
LIMIT 5;
```

| Result Grid | | | Filter Rows: |
|-------------|------------------------------|----------|--------------|
| | name | quantity | |
| ▶ | The Barbecue Chicken Pizza | 1104 | |
| | The Pepperoni Pizza | 1063 | |
| | The Hawaiian Pizza | 1034 | |
| | The Classic Deluxe Pizza | 1030 | |
| | The California Chicken Pizza | 1011 | |

PIZZASIZE

3. Identify the most common pizza size ordered.

```
SELECT
    pizzas.size,
    COUNT(orders_detail.order_details_id) AS order_count
FROM
    pizzas
    JOIN
    orders_detail ON pizzas.pizza_id = orders_detail.pizza_id
GROUP BY pizzas.size
ORDER BY order_count DESC;
```

| Result Grid | | | Filter Rows: |
|-------------|------|-------------|--------------|
| | size | order_count | |
| ▶ | L | 8072 | |
| | M | 6630 | |
| | S | 6137 | |
| | XL | 250 | |
| | XXL | 15 | |

4. LIST THE TOP 5 MOST ORDERED PIZZA TYPE ALONG THEIR QUANTITIES

```
SELECT
    pizza_types.name, SUM(orders_detail.quantity) AS quantity
FROM
    pizza_types
    JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
    JOIN
    orders_detail ON orders_detail.pizza_id = pizzas.pizza_id
GROUP BY pizza_types.name
ORDER BY quantity DESC
LIMIT 5;
```

| Result Grid   Filter Rows: <input type="text"/> | | |
|---|------------------------------|----------|
| | name | quantity |
| ▶ | The Barbecue Chicken Pizza | 1104 |
| | The Pepperoni Pizza | 1063 |
| | The Hawaiian Pizza | 1034 |
| | The Classic Deluxe Pizza | 1030 |
| | The California Chicken Pizza | 1011 |

5. JOIN THE NECESSARY TABLES TO FIND THE TOTAL QUANTITY OF EACH PIZZA CATEGORY ORDERED

```
SELECT
    pizza_types.category,
    SUM(orders_detail.quantity) AS quantity
FROM
    pizza_types
    JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
    JOIN
    orders_detail ON orders_detail.pizza_id = pizzas.pizza_id
GROUP BY pizza_types.category
ORDER BY quantity DESC;
```

| Result Grid | | |  |  | Filter |
|-------------|----------|----------|---|---|--------|
| | category | quantity | | | |
| ▶ | Classic | 6400 | | | |
| | Supreme | 5206 | | | |
| | Veggie | 5129 | | | |
| | Chicken | 4772 | | | |

6. DETERMINE THE TOP 3 MOST ORDERED PIZZA TYPES BASED ON REVENUE.

```
SELECT
    pizza_types.name,
    SUM(orders_detail.quantity * pizzas.price) AS revenue
FROM
    pizza_types
    JOIN
    pizzas ON pizzas.pizza_type_id = pizza_types.pizza_type_id
    JOIN
    orders_detail ON orders_detail.pizza_id = pizzas.pizza_id
GROUP BY pizza_types.name
ORDER BY revenue DESC
LIMIT 3;
```

| Result Grid | | | Filter Rows: |
|-------------|------------------------------|----------|--------------|
| | name | revenue | |
| ▶ | The Barbecue Chicken Pizza | 19464 | |
| | The Thai Chicken Pizza | 18125.5 | |
| | The California Chicken Pizza | 17754.25 | |

7. CALCULATE THE PERCENTAGE CONTRIBUTION OF EACH PIZZA TYPE TO TOTAL REVENUE.

```
select pizza_types.category,  
round(sum(orders_detail.quantity * pizzas.price)/ (SELECT  
    ROUND(SUM(orders_detail.quantity * pizzas.price),  
        2) AS total_sales  
FROM  
    orders_detail  
    JOIN  
        pizzas ON pizzas.pizza_id = orders_detail.pizza_id) * 100,2)  
from pizza_types join pizzas  
on pizzas.pizza_type_id = pizza_types.pizza_type_id  
join orders_detail  
on orders_detail.pizza_id = pizzas.pizza_id  
group by pizza_types.category order by revenue desc limit 4;
```

| Result Grid | | | Filter Rows: |
|-------------|------------------------------|----------|--------------|
| | name | revenue | |
| ▶ | The Barbecue Chicken Pizza | 19464 | |
| | The Thai Chicken Pizza | 18125.5 | |
| | The California Chicken Pizza | 17754.25 | |
| | The Classic Deluxe Pizza | 16031.5 | |
| | The Hawaiian Pizza | 13732.75 | |
| | The Pepperoni Pizza | 13251.75 | |
| | The Spicy Italian Pizza | 15101.75 | |

8.DETERMINE THE TOP 3 MOST ORDERED PIZZA TYPES BASED ON REVENUE FOR EACH PIZZA CATEGORY.

```
select name, revenue from
(
  (select category, name, revenue,
    rank() over(partition by category order by revenue desc) as rn
  from
    (SELECT pizza_types.category, pizza_types.name,
      sum((orders_detail.quantity) * pizzas.price) as revenue
    from pizza_types join pizzas
    on pizza_types.pizza_type_id = pizzas.pizza_type_id
    join orders_detail
    on orders_detail.pizza_id = pizzas.pizza_id
    group by pizza_types.category, pizza_types.name) as a) as b
  where rn <= 3;
```

| Result Grid | | | Filter Rows: |
|-------------|------------------------------|----------|--------------|
| | name | revenue | |
| ▶ | The Barbecue Chicken Pizza | 19464 | |
| | The Thai Chicken Pizza | 18125.5 | |
| | The California Chicken Pizza | 17754.25 | |
| | The Classic Deluxe Pizza | 16031.5 | |
| | The Hawaiian Pizza | 13732.75 | |
| | The Pepperoni Pizza | 13251.75 | |
| | The Spicy Italian Pizza | 15101.75 | |

CONCLUSION

- Summary:

SQL is a powerful tool for analyzing pizza sales data.

Insights gained can drive strategic decisions and improve sales performance.

- Next Steps:

Implement findings into business strategy.

Continuously monitor and analyze sales data for ongoing improvements.
